PROFESSIONAL SUMMARY

Versatile Computer Science graduate with strong expertise in data analysis, SQL, Python, and Power BI, seeking impactful roles across Data Analytics, Software Development, Business Analysis, and IT. Demonstrates a problem-solving mindset and consulting approach — transforming complex datasets into actionable business insights and delivering measurable outcomes through end-to-end analytical and development workflows.

SKILLS

Technical Skills: Python (Pandas, NumPy, Matplotlib, Seaborn) · SQL (MySQL – CTEs, Window Functions, Joins, Aggregations) · Microsoft Excel (Pivot Tables, VLOOKUP, Data Modeling)

BI & Reporting Tools: Power BI · KPI Dashboard Development · Data Visualization · Jupyter Notebook · Git & GitHub

Analytics & Concepts: Exploratory Data Analysis (EDA) · Data Cleaning & Transformation · Statistical Analysis · Customer Segmentation · RFM Analysis · Business Insights & Reporting

Other Technologies: Salesforce CRM · Agentforce · Workflow Automation · VS Code · Microsoft 365

Soft Skills: Problem-Solving · Analytical Thinking · Business Communication · Team Collaboration · Adaptability · Consulting Mindset

PROJECTS

Retail Sales Performance Analysis | Python · SQL · Power BI · Pandas · Matplotlib · Seaborn · Excel

- Cleaned and processed 541,909 retail transactions using Python (Pandas) and SQL — eliminating nulls, duplicates, and cancelled orders — improving dataset accuracy by 30% for reliable business reporting.
- Engineered 6 time-based features and conducted deep EDA; identified a 40% revenue spike in November, driving inventory pre-loading strategies and targeted seasonal promotions.
- Authored 9 advanced SQL queries (CTEs, window functions, aggregations) to surface month-over-month growth trends, top-10 revenue products, and country-level sales distribution.
- Built a Power BI KPI dashboard revealing the UK drives 84% of total revenue and a 16% cancellation rate; delivered 4 actionable business recommendations to stakeholders.

Customer Segmentation Using RFM Analysis | Python · SQL · Scikit-learn · Power BI · Pandas · Seaborn

- Engineered an RFM (Recency, Frequency, Monetary) scoring engine for 4,300+ customers using Python and SQL; applied quintile-based scoring to rank purchasing behaviour and identify high-value segments.
- Segmented customers into 5 strategic groups (Champions, Loyal, Potential Loyalists, At-Risk, Lost); identified the top 18% of customers generating 55% of total revenue for precision marketing.
- Applied K-Means Clustering (K=4, Silhouette Score: 0.62) with StandardScaler and log normalization; validated optimal clusters via Elbow Method and Silhouette analysis using Scikit-learn.
- Delivered segment-level marketing strategies projecting £80K+ in revenue recovery from At-Risk customers, visualized through an interactive Power BI dashboard for executive stakeholders.

EDUCATION

B.Tech – Computer Science and Engineering | Reva University, Bengaluru | Nov 2022 – May 2026 | **CGPA: 7.5 / 10**

Pre-University Education | Hanchinmani College, Dharwad | May 2020 | **87.33%**

CERTIFICATIONS

Salesforce Certified Agentforce Specialist – Salesforce | Dec 2025

SQL for Data Science – Great Learning | Oct 2025

Data Analysis with Python – Reva University | Sep 2025
